

Romec realise the importance of providing safe and satisfying washroom facilities as being integral to the care and wellbeing of employees and visitors.

The Romec washroom is fitted with the following safe and hygienic range of products:

#### **dyson airblade**

- Uses up to 80% less energy than warm air hand dryers
- 10 second dry time
- Costs less to run
- Touch-free operation
- Easy to clean
- Tough and durable

#### **Tork Aluminium**

**“...for hygiene and luxury”**

Touchless sensor-driven soap and paper towel dispensers are easy to use and maintain, and provide an easy to use and hygienic alternative to the traditional dispensers.

#### **Occupancy Sensor Lighting**

**Energy and cost savings.**

These detectors use specially developed ultrasonic radar which monitors a controlled space for movement. It is sensitive enough to respond to even very small movements thus ensuring that lights are sustained whenever the controlled space is occupied.

#### **Sensory Toilet**

**Variable flush volumes for improved water economy.**

A full flush uses 6 litres (most existing cisterns are either 7 litres or 9.5 litres).

The second flush is variable and can save up to 50% (3 litres).

- Hands free sensor operated WC cistern flush valve
- Single infrared sensor dual flush
- No cross-contamination
