SECURITY IS BUILT ON TRUST

Cost effective, flexible CCTV solutions from Romec

Today CCTV systems are a proven method of crime reduction and prevention offering security for both premises and personnel.

The development of new products and systems in this area is extending the use of CCTV and therefore a comprehensive choice of solutions is required to ensure customers achieve the most appropriate service.

Romec CCTV services offers flexible, comprehensive and cost effective solutions to match customer needs for on-site or remote surveillance.

LOCALLY RECORDED SURVEILLANCE SYSTEMS

When used for surveillance and theft prevention in combination with on-site guards using the system to 'patrol' premises it is paramount that a comprehensive and flexible solution, which surveys the entire location and is cost effective, is installed.

The key to obtaining such a system is in its initial design. Using Romec's dedicated team of professional and experienced design engineers provides customers with the most appropriate solution.

Where CCTV systems are used to record information for evidence gathering prior to prosecution it is essential that complete recording of all activity on site is achieved, bearing in mind that most cameras will be static.

Romec offers a wide range of solutions to meet these criteria using the latest available technology and innovative products. For example the latest 360° camera centrally positioned, provides a high quality undistorted image and all round view of incidents as they occur. Additionally it is largely unaffected by changes of layout or stock positioning.

REMOTELY MONITORED SOLUTIONS

Where either continuous or out-of-hours monitoring of CCTV systems are required remote transmission to the Romec certified Alarm receiving Centre (ARC) is an effective and efficient method.

The Romec ARC views CCTV images remotely by connecting to site using a range of high speed transmission paths such as an IP network or ISDN. *See the Romec NetSec™ range for details of secure communication path solutions.*

If an incident occurs action is immediately taken from the ARC including the use of two-way speech to deter potential intruders, alerting keyholders, manned guards or the Police.

DATA PROTECTION

Romec additionally provides advice on the requirements of data protection for CCTV systems and in particular how it applies to a customer's own installation.

An approved range of packages ensuring complicity with appropriate requirements plus approved products for the use of evidence gathering are all part of the Romec service.

CCTV DATA

- Availability of vast choice of cameras to suit all performance criteria, meet operational requirements and suit the aesthetics of the premises.
- Range of monitors and display solutions from small screen to large projected multi-image displays.
- Various transmission paths supported including coaxial, twisted pair (CAT5), fibre optic, Internet protocol and radio.
- Tailored video recording solutions from single-way recorders to fully networked systems covering multi-site operations. EPOS monitoring enables fast and accurate image recovery.
- Intelligent integration of CCTV systems with intruder alarms, access control and building management systems, all presented logically to reduce operator interaction. Touch screen graphical interfaces for full on-screen control of all the connected systems.
- Bespoke furniture to house system controls which complement existing architecture and provide an ergonomic working environment.

BENEFITS

- Full UK coverage.
- Local and remote recording/monitoring.
- Full back up by phone, remote diagnostics or engineers visit.
- Flexible, tailored solutions.
- System design through to monitoring and maintenance.
